AI Stocks Bull vs Bear Case

Ticker	The Bull Case (🚀 Why it Pumps)	The Bear Case (📉 Why it Dumps)
ORCL (Oracle)	Cloud Explosion: OCI (Cloud Infrastructure) revenue grows >40%, proving they are a real alternative to AWS/Azure for AI.	Capex Concerns: Massive spending on data centers eats into margins, and the \$500B+ backlog isn't turning into cash fast enough.
ADBE (Adobe)	AI Monetization: Clear proof that users are paying for "Firefly" and "AI Assistant." A solid beat and raise on new recurring revenue.	SaaS Fatigue: Investors fear AI "tools" like Canva or OpenAI's Sora are stealing Adobe's creative crown, leading to slower seat growth.
PATH (UiPath)	Agentic AI: Management proves that "AI Agents" are automating actual office work today, leading to a surprise profit margin expansion.	Growth Stall: Revenue growth slows below 15%. Investors view them as "old automation" rather than "new AI," leading to a valuation reset.
MU (Micron)	HBM Dominance: High-bandwidth memory (for AI chips) is sold out through 2026, leading to massive price hikes and "Supercycle" profits.	Inventory Peak: Fear that the "AI build-out" has peaked and that memory prices will crash if big tech slows down their AI spending.
LEN (Lennar)	"Asset-Light" Success: If they prove they can deliver 85,000 homes in 2026 without owning too much land, they stay cash-rich and can fund more share buybacks.	Margin Death Spiral: If they have to keep increasing "Buyer Incentives" (paying for people's mortgages) to sell houses, their profit margins will continue to crash.
