Exploring 'IV Crush' in 4 Simple Steps using moomoo Tools

| **Alwin** *@OptionsPlaybook*

Disclaimer

Options trading entails significant risk and is not appropriate for all customers. It is important that investors read Characteristics and Risks of Standardized Options before engaging in any options trading strategies. Opening new options positions close to or on their expiration date comes with substantial risk of losses for reasons that include potential volatility of the underlying security and limited time to expiration. Options transactions are often complex and may involve the potential of losing the entire investment in a relatively short period of time. Certain complex options strategies carry additional risk, including the potential for losses that may exceed the original investment amount. Supporting documentation for any claims, if applicable, will be furnished upon request. Options trading subject to eligibility requirements. Strategies available will depend on options level approved.

The P/L Analysis is for informational purposes only and should not be considered a personalized recommendation or investment advice. The P/L Analysis performs hypothetical calculations based on model assumptions and other inputs you select, which may not reflect actual market conditions and do not guarantee future results. Although hedging strategies seek to limit or reduce investment risk, they may also limit or reduce the profit potential. There is no assurance that hedging strategies will be successful.

IMPORTANT: The projections or other information generated by the Trend Projection tool regarding the likelihood of various investment outcomes are hypothetical in nature, do not reflect actual investment results and are not guarantees of future results. This presentation is for informational and educational use only and is not a recommendation or endorsement of any particular investment or investment strategy. Investment information provided in this content is general in nature, strictly for illustrative purposes, and may not be appropriate for all investors. It is provided without respect to individual investors' financial sophistication, financial situation, investment objectives, investing time horizon, or risk tolerance. You should consider the appropriateness of this information having regard to your relevant personal circumstances before making any investment decisions. Past investment performance does not indicate or guarantee future success. Returns will vary, and all investments carry risks, including loss of principal. moomoo makes no representation or warranty as to its adequacy, completeness, accuracy or timeliness for any particular purpose of the above content.

Options Playbook Webinars

Master **Options** with **Confidence**

- **Phase 1: Orientation:**
Master the core mechanics of options—like strikes, option chains, and buyer vs. seller dynamics—so you can stop feeling intimidated and start trading with confidence.
- **Phase 2: Income First:**
Learn to generate recurring income and lower your break-even points using Covered Calls, Cash-Secured Puts, and the Wheel Strategy.
- **Phase 3: Capital Efficiency & Structure:**
Maximize your capital's potential while strictly controlling your risk through LEAPS, Credit Spreads, and Directional Spreads.
- **Phase 4: Execution Mastery:**
Manage your trades like a seasoned professional by mastering advanced execution techniques like rolling, handling assignments, and setting automated exits.

IV Crush Playbook

Part 1: The Overlooked Earnings Setup: IV Crush

<https://www.moomoo.com/community/feed/part-1-the-overlooked-earnings-setup-iv-crush-115502598455705>

Part 2: Hunting the IV Crush — Identifying Potential Setups

<https://www.moomoo.com/community/feed/part-2-hunting-the-iv-crush-identifying-potential-setups-115542233972745>

Part 3: Mastering the Earnings Game — Build Your Strategy

<https://www.moomoo.com/community/feed/part-3-mastering-the-earnings-game-build-your-strategy-115581893804437>

Webinar Outline

Part 1: The What

IV Crush explained + Volatility lifecycle: Before → During → After

Part 2: The Why

Identify potential IV Crush setups on stocks heading towards earnings:
PDD · ONDS · NKE · GME · CCL · SGML

Part 3: The How

4 steps to build your option setups

Part 4: The Now

Taking action now with the IVCrush Playbook checklist

How Volatility Behaves Around Earnings

IV Builds Pre-Earnings

Fear inflates option premiums — sometimes 50–150% above normal levels

Earnings Day = Peak IV

Results announced → uncertainty gone → IV reason disappears instantly

Post-Earnings = Edge

Sell inflated premium before earnings. Buy back cheap after. Keep the difference.

Do We Have an Edge? Forward Test Results

IV Crush Probability — 4-Step Filter

COLOUR GUIDE:

GREEN = GOOD — proceed with confidence

AMBER = OK — caution, smaller size

RED = SKIP — avoid this setup

1

IV Level — Is it elevated near its peak?

e.g. PDD 90% ✓ NKE 94% ✓ CCL 96% ✓ | GME 22% ✗ ONDS 18% ✗

IV Percentile > 70%
Options are expensive
Good time to sell

IV Percentile 40–70%
Moderately elevated
Smaller position size

IV Percentile < 40%
IV is cheap
Not a good time to sell

2

Consistent Crush — Does it crush reliably?

e.g. PDD ✓ NKE ✓ GME ✓ CCL ✓ | ONDS ✗ avg 3.24% SGML ✗ inconsistent

Crush in most past periods
A repeatable edge you can lean on

Some periods crush some don't
Proceed with caution

Inconsistent or negative
No reliable pattern
Skip this stock

3

Double Digit Crush — Is the drop big enough to profit?

e.g. PDD 13.46% ✓ NKE 16.32% ✓ GME 23.37% ✓ CCL 11.49% ✓ | ONDS 3.24% ✗ SGML 9.17% ✗

Avg crush > 10%
Enough premium decay to cover spread cost

Avg crush 5–10%
Borderline — only trade if premium also elevated

Avg crush < 5%
Not enough decay
Spread not worth it

4

Implied vs Expected Move — Is the premium rich?

e.g. CCL: $\pm 2.53 > \pm 1.77$ hist ✓ | NKE: $\pm 4.83 < \pm 7.18$ hist ✗ GME: $\pm 1.61 < \pm 4.65$ hist ✗

Implied MORE than historical expected
Market overpricing options

Implied roughly equal
Fair value premium
Tighter spread, smaller size

Implied LESS than historical expected
Options may be cheap — skip

PDD

Earnings: 25 Mar 2026

IV Crush Probability Checklist

A+**1****IV Level***Is IV elevated near peak?***✓ Elevated — IV 53.8%, Percentile 90%****2****Consistent Crush %***Consistent crush in past periods?***✓ Yes — 10 of 11 past periods showed crush****3****Double Digit Crush***Double digit % crush recorded?***✓ Yes — avg 13.46% crush (double digit)****4****Implied vs Expected***Implied move MORE or LESS than historical expected move?***⚡ OK — Implied ± 7.71 vs hist ± 10.50 (less — caution)****Consider: Bearish → Call Credit Spread · Sell OTM Call above expected move · Buy further OTM Call to cap loss**

ONDS

Earnings: 25 Mar 2026

IV Crush Probability Checklist

B**1****IV Level***Is IV elevated near peak?***✗ Not at peak — IV Percentile only 18%****2****Consistent Crush %***Consistent crush in past periods?***✗ No — inconsistent, many gaps in history****3****Double Digit Crush***Double digit % crush recorded?***✗ No — avg only 3.24%, some negative periods****4****Implied vs Expected***Implied move MORE or LESS than historical expected move?***⚡ OK — Implied ± 1.52 marginally $>$ hist ± 1.20**

Consider: Neutral (caution) → Iron Condor (small size) · 3 of 4 steps fail — B grade · very small position only

NKE

Earnings: 31 Mar 2026

IV Crush Probability Checklist

A+**1****IV Level***Is IV elevated near peak?***✓ Elevated — IV 52.7%, Percentile 94%****2****Consistent Crush %***Consistent crush in past periods?***✓ Yes — consistent all 10 past periods****3****Double Digit Crush***Double digit % crush recorded?***✓ Yes — avg 16.32% (strong double digit)****4****Implied vs Expected***Implied move MORE or LESS than historical expected move?***✗ Caution — Implied ± 4.83 < hist ± 7.18 (selling cheap)****Consider: Bearish → Short Call Spread · Strong crush history · size down due to Step 4 warning**

First 5 to answer can WIN 200 moomoo POINTS (21 working days)

Q1

Which moomoo feature helps you estimate the expected price range of a stock during earnings?

A

Options Chain

B

Expected Move Indicator

C

Strategy Builder

D

Order Book

Drop your answer in the chat now!

Q1

Which moomoo feature helps you estimate the expected price range of a stock during earnings?

A

Options Chain

B

✓ **Expected Move Indicator**

C

Strategy Builder

D

Order Book

Why B is correct:

The Expected Move Indicator on moomoo visually displays the market-implied upper and lower price range for a stock heading into earnings. This is the key tool for selecting your strike prices — all credit spread legs can be placed OUTSIDE this range to give the trade room to work.

GME

Earnings: 24 Mar 2026

IV Crush Probability Checklist

A**1****IV Level***Is IV elevated near peak?***✗ Not at peak — IV Percentile only 22%****2****Consistent Crush %***Consistent crush in past periods?***✓ Yes — consistent double-digit crush 11 periods****3****Double Digit Crush***Double digit % crush recorded?***✓ Yes — avg 23.37% (highest in watchlist)****4****Implied vs Expected***Implied move MORE or LESS than historical expected move?***✗ Skip — Implied ± 1.61 << hist ± 4.65 (very cheap)****Consider: Neutral → Iron Condor · Good crush history · BUT low IV %ile + cheap premium limits edge**

CCL

Earnings: 27 Mar 2026

IV Crush Probability Checklist

A**1****IV Level***Is IV elevated near peak?*✓ **Elevated — IV 69.3%, Percentile 96%****2****Consistent Crush %***Consistent crush in past periods?*✓ **Yes — consistent 8 of 10 past periods****3****Double Digit Crush***Double digit % crush recorded?*✓ **Yes — avg 11.49%, including recent 10.65%****4****Implied vs Expected***Implied move MORE or LESS than historical expected move?*✓ **Good — Implied ± 2.53 > hist ± 1.77 (rich premium!)**

Consider: Bearish → Short Call Spread · All 4 steps pass · richest implied premium in watchlist

SGML

Earnings: 30 Mar 2026

IV Crush Probability Checklist

**1****IV Level***Is IV elevated near peak?*

⚡ High IV 126.9% but Percentile 77% — misleading

2**Consistent Crush %***Consistent crush in past periods?*

✗ No — very inconsistent, several negative periods

3**Double Digit Crush***Double digit % crush recorded?*

✗ No — avg 9.17% only, one outlier skews the data

4**Implied vs Expected***Implied move MORE or LESS than historical expected move?*

⚡ OK — Implied ± 1.88 slightly $<$ hist ± 2.45

Consider: ⚠ Observe Only → Do Not Trade (Beginners) · 2 of 4 steps fail · high IV does not mean safe · skip

Which Stocks Pass the IV Crush Filter?

Apply the same 4 steps to every stock. The grade tells you where to focus.

Ticker	Step 1 IV Level	Step 2 Consistent	Step 3 Dbl Digit	Step 4 Implied vs EM	Grade	Consider Setup
PDD	✓ 90%ile	✓ Yes	✓ 13.46%	⚡ LESS	A+	Call Credit Spread
CCL	✓ 96%ile	✓ Yes	✓ 11.49%	✓ MORE	A	Short Call Spread
NKE	✓ 94%ile	✓ Yes	✓ 16.32%	✗ LESS	A+	Short Call Spread
GME	✗ 22%ile	✓ Yes	✓ 23.37%	✗ LESS	A	Iron Condor
ONDS	✗ 18%ile	✗ No	✗ 3.24%	⚡ Marginal	B	Iron Condor (small)
SGML	⚡ 77%ile	✗ No	✗ 9.17%	⚡ LESS	⚠	Observe Only

🏆 Best focus for tonight: CCL (4 green ✓) and PDD (3 green ✓) · Both have elevated IV %ile, consistent crush, double-digit crush & cleaner premium signal

Q2

What is one key reason traders may use a credit spread instead of a single short option?

A

To maximise leverage

B

To define and limit potential risk

C

To avoid using margin

D

To ensure profits

**Q2**

What is one key reason traders may use a credit spread instead of a single short option?

A

To maximise leverage

B

✓ **To define and limit potential risk**

C

To avoid using margin

D

To ensure profits

Why B is correct:

A single short option (e.g. short call or short put) carries theoretically unlimited loss — the stock can move far against you with no cap. A credit spread adds a buy leg at a further strike, which acts as insurance. This caps your maximum loss to the width of the spread minus the premium received — giving you defined, knowable risk from the moment you enter the trade.

3 Strategies for 3 Biases

BEARISH

Call Credit Spread

SELL OTM Call — above expected move

BUY Higher OTM Call — caps loss

- ✓ Risk Defined
- ✓ Selling Inflated IV
- ✓ Stock likely to stay flat or fall

BULLISH

Put Credit Spread

SELL OTM Put — below expected move

BUY Lower OTM Put — caps loss

- ✓ Risk Defined
- ✓ Selling Inflated IV
- ✓ Stock likely to stay flat or rise

NEUTRAL

Iron Condor

SELL OTM Call + OTM Put (both sides)

BUY Wider strikes on both sides

- ✓ Risk Defined
- ✓ Selling Inflated IV
- ✓ Stock stays range-bound

ALL 3 strategies: Enter before earnings close · Exit next morning after IV crush · Close with profit/loss · Do NOT overstay

Execution Timing & Strike Selection Rules

1 DAYS BEFORE EARNINGS

- Identify stock on moomoo Upcoming Earnings screener — filter by IV Percentile > 70%
- Verify Historical IV Crush > 10% AND consistent across ≥ 4 past periods (A+ setup)
- Review Expected Move range — identify upper and lower price bounds
- Check chart trend for directional bias — confirms strike placement logic

2 DAY OF EARNINGS (Before Market Close)

- Open Strategy Builder — select spread type based on bias (bearish/bullish/neutral)
- Set short leg OUTSIDE expected move — above upper or below lower bound
- Set long leg further OTM — this defines your maximum loss
- Review max profit, max loss, breakeven — submit credit order only if risk is acceptable

3 AFTER EARNINGS (Next Morning Open)

- Monitor: IV should have crushed significantly overnight after the announcement
- If profit target hit (50–80% of max profit) → CLOSE the position immediately
- Do NOT hold to expiry hoping for more — the edge (IV crush) is already realised
- Risk rule: if short leg breached, close immediately — do not average down

⚠ Key Discipline: Profit comes from IV crush — NOT from holding to expiry. Close early. Protect your gain.

Live moomoo Tools

01

Earnings Calendar / Filter

Open moomoo → Options Tab → Upcoming Earnings. Filter IV Percentile >70 and Hist. IV Crush >10%. Shortlist A/A+ candidates.

02

Options Chain

Click into the stock. Check current IV, IV Rank, IV Percentile. Verify implied move vs historical expected move ratio.

03

Expected Move Indicator

Tap Expected Move. Identify upper and lower bounds. ALL strikes must be placed OUTSIDE these lines.

04

Strategy Builder

Select spread type matching your bias. Set short leg outside EM, long leg further OTM. Review P&L profile before confirming.

05

moomoo AI Validation

Run setup through moomoo AI. Validates risk/reward, flags issues. Your built-in second opinion before execution.

Signal identified → Scenario reviewed → Risk defined. Are you ready to explore this setup further?

Remember the Framework

01**THE WHAT**

IV Crush = volatility lifecycle: builds before, peaks at earnings, collapses after

02**THE WHY**

PDD & NKE = A+. CCL & GME = A. ONDS = B. SGML = Observe only

03**THE HOW**

Credit spreads with defined risk. Entry before earnings. Exit next day regardless of profit/loss (unless you know how to manage risk)

04**THE NOW**

4-step moomoo: Screener → Chain → Expected Move → Strategy Builder → Execute

Signal identified → Scenario reviewed → Risk defined.
Are you ready to explore this setup further? 🚀

➡️ SOON Paper trade this playbook first to understand how these strategies behave before using a real account
